The original table is already in 1NF
It contains primary keys: customer number, date, time, part number
There is no replication in the table

2NF
We can see that there is partial dependency in the table, some attributes only depend on part of the primary key, not all of them.
To be more specifically:
(1) customerName, customerType only depend on CustomerNumber
(2) partName, partType, cageCode, unitPrice only depend on partNumber
(3) employee only depends on customerNumber, date, and time

3NF
since there is no transitive dependency in each table, the data are already in 3NF
